Hydrocolloid Launch Runbook

Revision 2 · Sep 27, 2026 · Owner: @H

This is the execution list for the hydrocolloid roll launch on TikTok and Meta. Work through the calendar one day at a time and check off each box. When a calendar item says "Setup N", follow that setup's click-by-click steps in the Setup guide. Send the Friday report every week. Anything marked **ESCALATE** goes to Harold the same day.

At a glance

Item	Value
Products	16 ft roll (`HC-ROLL16FT`) **$15.99** · 5 ft roll (`HC-ROLL5FT`) **$9.99**
TikTok discount	Shop voucher **HC10**: 10% off, new customers, 1 per customer. Show it on every TikTok video, caption and live.
Shopify discounts	**TIKTOK10** (only for the Shopify link in the TikTok bio) and **META10** (Meta ads). Both 10% off, one use per customer.
Why two kinds	Shopify codes do not work at TikTok Shop checkout. A buyer who taps the orange cart pays inside TikTok, so TikTok content uses the HC10 voucher.
Paid budgets	GMV Max $50/day from Day 9 · Live Shopping ad $20 per live · Spark Ads 3 × $20/day from Week 3 · Meta $50/day from Week 3. **Planned total from Week 3: about $1,140/week** before any Rules-table increase.
People	**You**: run this document. **Harold**: approvals and escalations. **Katy**: live host. **Editors**: video cuts. **Ops**: ships Shopify and TikTok Shop orders and samples.
Deadlines	Friday report to Harold by 3 pm ET every Friday. Affiliate sample requests: approve within 24 hours and ship the same day.

Setup guide

These are the click-by-click steps. Do each one on the day the calendar gives it, not all at once. You need the Day 1 logins before any of them will work. TikTok renames menus a few times a year. If a label is slightly different, pick the closest match. If a screen doesn't match at all, send Harold a screenshot rather than guessing.

Setup 1. Connect TikTok Shop to Shopify (Day 2)

Result: TikTok Shop orders land in Shopify for shipping, and the TikTok pixel and Events API are installed.

1. Shopify admin > Apps > search "TikTok" > install the official TikTok app.
2. In the app: Connect TikTok Ads account (Ovena TikTok Ads login), then Connect TikTok Shop (Seller Center login). Approve both.
3. Turn on Product sync and Order sync. Check the box that sends TikTok Shop orders into Shopify orders.
4. Data sharing: set to Maximum. This installs the TikTok pixel and Events API.
5. Shopify > Orders: confirm the filter "Sales channel: TikTok" exists. Ops ships these like any Shopify order.

Setup 2. List both rolls in TikTok Shop (Day 3)

1. seller-us.tiktok.com (Seller Center) > Products > Manage Products.
2. If the Shopify sync already pushed the rolls over, open each one and complete the fields below. If not, use Add New Product.
3. Category: Health > Medical Supplies > Wound Care, or the closest wound care or first aid category offered.
4. Product names:
   "Ovena Hydrocolloid Roll 2 in x 16 ft, Cut-to-Size Hydrocolloid Bandage"
   "Ovena Hydrocolloid Roll 2 in x 5 ft, Cut-to-Size Hydrocolloid Bandage"
5. Images: at least 5, with the roll on white as the first. Use the Shopify photos.
6. Description: paste the Shopify description. Delete any sentence that uses a word from the never-use list in Rules. Add no new claims.
7. Price: $15.99 (16 ft) and $9.99 (5 ft). Stock: match Shopify.
8. Shipping: Shipping template > Seller shipping > ships from the California address > handling time 3 business days.
9. Attributes: fill in every required field. If TikTok asks for certification, upload the regulatory document Harold provides. Do not pick one yourself.
10. Submit. Status shows Reviewing and usually clears in 1 to 2 days. Check Products > Manage Products daily. **ESCALATE** a rejection.

Setup 3. Create voucher HC10 (Day 3)

1. Seller Center > Marketing > Promotions > Create > Voucher (or Product Discount).
2. Type: Product voucher. Discount: 10% off. Applies to: both rolls. Audience: New customers. Claim limit: 1 per customer. Start today, no end date. Name: **HC10**.
3. Save. It shows as a claimable coupon on the product page and in lives.

Setup 4. Open the affiliate plan (Day 6)

1. Seller Center > Affiliate (or Affiliate Center) > Affiliate Plans > Open Plan > Create.
2. Add both rolls. Commission rate: 20%. Plan name: Hydrocolloid Open 20.
3. Free samples: on, 1 roll per creator, approval required, cap 50.
4. Save. Sample requests appear under Affiliate > Samples.
5. To invite a specific creator: Affiliate > Find Creators > search by handle > Invite (Targeted Plan, same 20%), or DM them the outreach message from Rules.

Setup 5. Post a video with the product tagged (Day 6 onward)

1. Open the TikTok app, logged in as Ovena. Tap + > upload the file from the Cuts folder.
2. Caption: one line with "10% off your first order in the cart" and no more than 3 hashtags (#hydrocolloid #skincare #tiktokshop).
3. Add link > Product > choose the 16 ft roll. This puts the orange shopping cart on the video.
4. Post. Share > Copy link, then paste the link into the Video tab.
5. To make the video available as a Spark Ad later: on the video, tap > three dots > Ad settings > turn on Ad authorization. Copy the code into the Video tab.

Bio (set once): the Shopify hydrocolloid link with code TIKTOK10, for people who would rather buy on the website.

Setup 6. Go live with the Shop (Day 8, then every Wednesday)

1. LIVE may need 1,000 followers. It may also be available to Shop-linked accounts, which Ovena is after Setup 1; TikTok's current rule is unconfirmed. If LIVE is greyed out, **ESCALATE**.
2. TikTok app > + > swipe to LIVE. Title: "16 ft hydrocolloid for $15.99, cut your own patches."
3. Shopping bag icon > Add products > select both rolls > Pin the 16 ft roll.
4. Voucher icon > add HC10 so it shows on screen.
5. Go LIVE. Every 5 minutes: cut a piece, stick it on, say the price, and point to the cart.
6. After the live: Profile > LIVE Center > this live. Log viewers, orders and revenue in the Lives tab. Save the replay.

Setup 7. Paid campaigns on TikTok (Day 8 and Day 9)

1. **Live Shopping ad (Day 8):** ads.tiktok.com > Campaign > Create > Product Sales > Live Shopping > the Ovena account > budget $20 > schedule it from 15 minutes before the live until the end of the live.
2. **GMV Max (Day 9):** Campaign > Create > GMV Max, which is a tile on the create screen. If the tile isn't there, go to Seller Center > Marketing > Ads. Type: Product GMV Max.
3. Select the 16 ft roll. Target ROI: 2.0. Daily budget: $50. Creative: leave "all videos" selected so it uses account and affiliate videos.
4. Submit, then change nothing for 7 days. Read results at Ads Manager > Campaigns, in the Cost, Orders and ROI columns.

TikTok's "ROI" is gross revenue ÷ ad cost, the same number this document calls ROAS. If Ads Manager sends you into GMV Max when you try to create a Live Shopping ad or a Spark Ad for a Shop product, stop and **ESCALATE**. Don't work around it.

Week 1: set up

Day 1 (Mon): accounts, sheet, baseline

- [ ] Get admin access to: TikTok Shop Seller Center, TikTok Ads Manager, the Ovena TikTok account, Meta Business Suite, Shopify admin, Klaviyo.
- [ ] Create the tracking sheet (see Tracking sheet) and share it with Harold.
- [ ] Create the shared folder /Hydrocolloid Launch/ with subfolders Raw Video, Cuts, Statics, Affiliate List, Reports.
- [ ] Record the baseline in the Weekly tab: average weekly hydrocolloid orders on Shopify and on Amazon over the 4 weeks before launch. Without it, the launch's lift can't be measured.

Day 2 (Tue): Shopify page, pixels, codes

- [ ] Confirm the hydrocolloid product page shows: 16 ft roll $15.99, 5 ft roll $9.99, shipping cost before checkout, and a 2-roll bundle option.
- [ ] Do **Setup 1**. It installs the TikTok pixel and Events API.
- [ ] Install the Meta pixel and Conversions API through Shopify app "Facebook & Instagram".
- [ ] Pixel test: buy one 5 ft roll at full price with the company card. Confirm the Purchase event appears in both TikTok Events Manager and Meta Events Manager, then refund the order. **ESCALATE** if either event hasn't fired by end of day.
- [ ] Create two Shopify discount codes, each 10% off and one use per customer: TIKTOK10 and META10.
- [ ] Add a post-purchase survey app (KnoCommerce or Zigpoll) with two questions: "Where did you see us?" (TikTok video / TikTok live / Instagram or Facebook / Amazon / friend / other) and "Which video?" (free text).

Day 3 (Wed): TikTok Shop listing

- [ ] Do **Setup 2** for both rolls, then **Setup 3** (voucher HC10).
- [ ] Check listing status daily until both rolls are approved. **ESCALATE** if one is rejected.

Day 4 (Thu): creative cuts

- [ ] Send the editors every existing hydrocolloid video with this instruction: three versions of each, same body, different first 3 seconds: (a) price math on screen, "16 ft for $15.99"; (b) "Stop buying pimple patches"; (c) scissors cutting the roll, close up.
- [ ] File names: `HC-[video#]-[a/b/c]-v1.mp4`. Log each one in the Video tab.
- [ ] Due from editors: Monday of Week 2.

Day 5 (Fri): affiliate list and first report

- [ ] Build the affiliate list: 50 TikTok creators with 5k to 100k followers, in skincare, running or mom content, with the TikTok Shop affiliate badge. Columns: handle, followers, niche, email or DM, status.
- [ ] Send the outreach message (see Rules) to Harold for a one-time OK.
- [ ] Send the Friday report by 3 pm ET.

Week 2: go live

Day 6 (Mon): start posting

- [ ] Post the first video (**Setup 5**). From today, post one video a day, 5 days a week. Best slots: 7 to 9 am or 6 to 9 pm ET.
- [ ] Log each post in the Video tab: date, file name, hook version, link.
- [ ] Do **Setup 4** (affiliate plan).
- [ ] Send the outreach message to creators 1 to 25. Set their status to "sent".

Day 7 (Tue)

- [ ] Post video 2.
- [ ] Reply to every comment on video 1. Answer questions with a 15-second reply video (phone, roll in hand). Injury or reaction comments get no reply; follow Escalations.
- [ ] Send outreach to creators 26 to 50.

Day 8 (Wed): first live

- [ ] Morning: post video 3 with the caption "Live at 7 pm ET tonight."
- [ ] Live kit: ring light, phone on a stand, the roll, scissors, a competitor patch box, a shoe (blister demo), and a printed price card reading "16 ft = $15.99".
- [ ] Create the Live Shopping ad (**Setup 7**, step 1).
- [ ] 7:00 pm ET, 45 minutes, Katy on camera (**Setup 6**).
- [ ] After: save the replay, log the numbers in the Lives tab, and send the editors the best 30 seconds to cut as a post.

Day 9 (Thu): first paid campaign

- [ ] Post video 4.
- [ ] Create the GMV Max campaign (**Setup 7**, steps 2 to 4). Change nothing for 7 days.
- [ ] Approve pending sample requests and ship them the same day with a printed note: "Post within 14 days, tag @ovenahealth, and turn on the paid-partnership toggle and #ad." Log every roll sent in the Affiliates tab.

Day 10 (Fri)

- [ ] Post video 5.
- [ ] Follow up once with creators who haven't replied.
- [ ] Fill in the sheet: spend, orders and cost per order from Ads Manager; Shop orders from Seller Center; Shopify orders by code.
- [ ] Friday report by 3 pm ET. Include: the 5 posts with views, the live numbers, affiliates accepted, and GMV Max spend and orders.

Weeks 3 and 4: Meta on, scale what works

Week 3, Monday: pick winners

- [ ] Compare only videos that have been live for at least 48 hours. Anything newer hasn't finished collecting views.
- [ ] Sort the Video tab by views. The top 3 become Spark Ads: Ads Manager > Spark Ad, using the authorization code from the Video tab, objective Product Sales, $20/day each, for 7 days.
- [ ] Sort by orders. The top hook version (a, b or c) becomes the one the editors lead with on all new cuts.
- [ ] Send Harold the top 3 links and their numbers.

Week 3, Tuesday: Meta launch

- [ ] Ads Manager > Create > Sales. Conversion location: Website. Event: Purchase. Campaign name: HC-Meta-Prospecting.
- [ ] Ad set: Advantage+ audience, United States, ages 18 to 54, Advantage+ placements, $50/day, no end date.
- [ ] Ads: 6 videos (the top TikTok cuts, using the original files from the Cuts folder, not TikTok downloads, which carry a watermark) and 3 statics from the editors (price math, roll vs. patch box, four-uses grid).
- [ ] Primary text on all ads: "16 ft of hydrocolloid for $15.99. Cut your own patches. 10% off your first order with code META10." Headline: "Ovena Hydrocolloid Roll." Link: the Shopify hydrocolloid page with `?utm_source=meta&utm_campaign=hc-prospecting`.
- [ ] Submit. Check approval the next morning. **ESCALATE** any rejection with its stated reason.

Rest of Week 3 and Week 4: run the rules

Check	When	Rule
Meta ad link CTR	Daily	Under 1.0% after $75 spent on that ad: turn the ad off.
Meta cost per order	Daily	$7 or less for 3 days in a row: raise the ad set budget 20%. Over $10 for 3 days in a row: cut it 20%. Anywhere in between: no change.
GMV Max ROI	Daily, after day 7	2.0 or higher for 3 days: raise the budget 20%. 1.5 to 2.0: no change. Under 1.5 for 5 days: **ESCALATE**.
Spark Ads	Every 7 days	Replace the 3 boosted videos with the current top 3.
New creative	Every 10 days	Ask the editors for 5 new cuts using the winning hook.
Any platform	After $1,500 cumulative spend	ROAS under 1.5: pause that platform and **ESCALATE**.

No budget goes up more than 20% in one day, on any platform. If total weekly spend goes above the planned $1,140, say so in the Friday report.

Where the $7 and $10 come from

A Meta order with META10 brings in $14.39. Take off the roll's landed cost of $3.20 (supplier invoice, delivered duty paid) and about $0.72 in card fees (estimate: 2.9% + $0.30). That leaves about **$10.47 before outbound shipping**. So $10 is the most a Meta order can cost before it loses money, and it assumes the buyer pays shipping. If Ovena pays shipping (about $4 to $5 a parcel, estimated), break-even drops to about $6, and Harold should lower both thresholds.

On TikTok, an order that came through an affiliate also pays 20% commission ($2.88) and TikTok's referral fee (about 6%, to confirm in Seller Center). That leaves about $7.45 before shipping, a break-even ROI of about 1.9. The "no change" band of 1.5 to 2.0 can therefore lose money when most orders come through affiliates.

Routine after launch

Every day, 30 minutes, first thing

- [ ] Post the day's TikTok video with the product tagged.
- [ ] Reply to all comments and DMs on TikTok and Meta, except the ones listed under Escalations.
- [ ] Enter yesterday's numbers in the Daily tab.
- [ ] Check that TikTok Shop orders shipped within 3 business days. Message Ops about any that are late.
- [ ] Run the Rules table.

Every week

- [ ] Wednesday 7 pm ET: 45-minute live with a $20 Live Shopping ad.
- [ ] Thursday: approve sample requests and ship them the same day. Follow up with creators who are more than 14 days past their sample and haven't posted.
- [ ] Friday: fill in the Weekly tab and send the Friday report to Harold by 3 pm ET.

Every 2 weeks

- [ ] Send the editors the top 3 videos and the winning hook. Get 5 new cuts back within a week.
- [ ] Send the next 25 creator invites.

Tracking sheet

One Google Sheet with four tabs. Numbers go in daily. The Friday report is a screenshot of the Weekly tab plus three sentences: what won, what got turned off, and what you need.

Daily tab (one row per platform per day)

Column	Source
Date	Calendar day, ET
Platform	TikTok organic / TikTok paid / TikTok live / Affiliate / Meta
Spend $	TikTok Ads Manager, Meta Ads Manager
Orders	Seller Center for Shop orders; Shopify orders filtered by code (TIKTOK10, META10) or by UTM for Meta
Revenue $	Same sources as Orders
Cost per order $	Spend ÷ Orders
ROAS	Revenue ÷ Spend (TikTok labels this ROI)
Survey mentions	Post-purchase survey export

Video tab (one row per posted video): date, file name, hook a/b/c, TikTok link, Spark authorization code, views, likes, comments, Shop clicks, orders (Seller Center > Analytics > Video), boosted Y/N.

Lives tab (one row per live): date, host, peak viewers, total viewers, orders, revenue, ad spend, replay link.

Affiliates tab (one row per creator): handle, followers, niche, status (list / sent / accepted / sample shipped / posted), sample ship date, post link, orders, commission paid.

Weekly tab: totals from the Daily tab by platform, plus total hydrocolloid orders from all sources, set against the Day 1 baseline.

Rules

Words you can use: protects, cushions, keeps the area moist, waterproof, medical-grade hydrocolloid, cut to size, from Ovena Health, a US medical device company.

Words you never use in captions, replies, lives or ads: heals, cures, treats acne, clears skin, removes scars, any number of days to heal, "better than" a named brand, "Made in USA" or anything that implies the rolls are made in the US. Don't mention the FDA at all unless Harold has approved the exact wording.

Images: no open wounds, blood or pus. Pimples and blisters shown covered are fine. No before-and-after framing on Meta; use "day 1 / day 3, still on."

Affiliates: every creator video carries both #ad and TikTok's paid-partnership toggle. Log every roll sent out.

Reviews on camera: real customer reviews only, read word for word.

Creator outreach message (DM or email):

> *Hi [name], I'm with Ovena Health, a US medical device company. We make a hydrocolloid roll (the same material as pimple patches, 16 ft for $15.99, cut your own). We'd love to send you a free roll to try for a TikTok Shop video, with 20% commission on every sale through your link. Interested? I'll ship it this week.*

Escalations

Send these to Harold the same day:

- A listing or ad rejection on any platform.
- A pixel that stops firing.
- GMV Max ROI under 1.5 for 5 days, or any platform under 1.5 ROAS after $1,500 cumulative spend.
- A video that passes 100k views, so budget can move fast.
- A creator who asks for a flat fee.
- An Ads Manager screen that forces GMV Max when you are creating a Spark or Live Shopping ad.

> **Injury, allergic reaction or any medical complaint**
>
> Do not reply, hide or delete it. Take a screenshot that shows the handle, date, platform and full text, and forward it to Harold the same day. Harold enters it in the company complaint file. That record is a medical-device requirement, so treat every one this way, however minor it looks.

Do not change budgets, targets or prices outside the Rules table without an OK from Harold.
